

nikangie

Nikangie is the new Gala clone selected to give more advantages to growers. More production (the harvest time is earlier than the Gala standard). Larger size (greater gains determined by the caliber).

With the same processing-time it will be possible to obtain big results above the norm.

The vivid-shiny red colour and bold stripes make the apple beautiful and appetizing, perfect for sales!

This is the Clone that takes us back to the Gala standard, removing its defects, bringing the farmer to the old profit that this variety knows and can still give.
